

When **two figures** are congruent, their corresponding parts (sides and angles) are congruent

Corresponding Angles

$$\angle A \cong \angle D$$

$$\angle B \cong \angle E$$

$$\angle C \cong \angle F$$

Corresponding Sides

$$\overline{AB} \cong \overline{DE}$$

$$\overline{BC} \cong \overline{EF}$$

$$\overline{AC} \cong \overline{DF}$$

Complete the following statements:

$$\triangle ABC \cong \triangle DEF$$

$$\triangle CBA \cong \triangle FED$$

$$\triangle BCA \cong \triangle EFD$$

The given figures are congruent. Use the markings to complete the congruence statements.

Ex 1

$$\triangle BCA \cong \triangle DFE$$

Ex 2

$$NKJL \cong SRUT$$

Ex 3

$$\triangle QPM \cong \triangle EDR$$

IF we know that **two triangles** are congruent,

we can name all pairs of corresponding parts congruent because...

Corresponding **P**arts of **C**ongruent **T**riangles are **C**ongruent or CPCTC for short.

IF 2 Δ 's are $\cong \rightarrow$ all the corresponding parts are \cong Why?? CPCTC
