

## Toulmin Argument

In *The Uses of Argument* (1958), British philosopher Stephen Toulmin presented structures to describe the way that ordinary people make reasonable arguments. Because Toulmin's system acknowledges the complications of life—situations when we qualify our thoughts with words such as sometimes, often, presumably, unless, and almost—his method isn't as airtight as formal logic that uses syllogisms (see p. 121 in this chapter and p. 63 in Chapter 4). But for that reason, Toulmin logic has become a powerful and, for the most part, practical tool for understanding and shaping arguments in the real world.

Toulmin argument will help you come up with and test ideas and also figure out what goes where in many kinds of arguments. Let's take a look at the basic elements of Toulmin's structure:

- Claim
- Qualifiers
- Reason(s)/Evidence
- Warrants
- Backing
- evidence for warrant
- any limits you place on your claim
- support for your claim

underlying assumptions that support your claim

If you wanted to state the relationship between them in a sentence, you might say:

My claim is true, to a qualified degree, because of the following reasons, which make sense if you consider the warrant, backed by these additional reasons.

These terms—claim, evidence, warrants, backing, and qualifiers—are the building blocks of the Toulmin argument structure. Let's take them one at a time.

### Making Claims

Toulmin arguments begin with claims, debatable and controversial statements or assertions you hope to prove. A claim answers the question So what's your point? or Where do you stand on that? Some writers might like to ignore these questions and avoid stating a position. But when you make a claim worth writing about, then it's worth standing up and owning it.

Is there a danger that you might oversimplify an issue by making too bold a claim? Of course. But making that sweeping claim is a logical first step toward eventually saying something more reasonable and subtle. Here are some fairly simple, undeveloped claims:

Congress should enact legislation that establishes a path to citizenship for illegal immigrants.

It's time for the World Health Organization (WHO) to exert leadership in coordinating efforts to stem the Ebola epidemic in West Africa.

NASA should launch a human expedition to Mars.

Veganism is the most responsible choice of diet.

Military insurance should not cover the cost of sex change surgery for service men and women.

Good claims often spring from personal experiences. You may have relevant work or military or athletic experience—or you may know a lot about music, film, sustainable agriculture, social networking, inequities in government services—all fertile ground for authoritative, debatable, and personally relevant claims.

### RESPOND •

Claims aren't always easy to find. Sometimes they're buried deep within an argument, and sometimes they're not present at all. An important skill in reading and writing arguments is the ability to identify claims, even when they aren't obvious.

Collect a sample of six to eight letters to the editor of a daily newspaper (or a similar number of argumentative postings from a political blog). Read each item, and then identify every claim that the writer makes. When you've compiled your list of claims, look carefully at the words that the writer or writers use when stating their positions. Is there a common vocabulary? Can you find words or phrases that signal an impending claim? Which of these seem most effective? Which ones seem least effective? Why?

### Offering Evidence and Good Reasons

You can begin developing a claim by drawing up a list of reasons to support it or finding evidence that backs up the point.

One student writer wanted to gather good reasons in support of an assertion that his college campus needed more official spaces for parking bicycles. He did some research, gathering statistics about parking-space allocation, numbers of people using particular designated slots, and numbers of bicycles registered on campus. Before he went any further, however, he listed his primary reasons for wanting to increase bicycle parking:

- Personal experience: At least twice a week for two terms, he was unable to find a designated parking space for his bike.
- Anecdotes: Several of his friends told similar stories. One even sold her bike as a result.
- Facts: He found out that the ratio of car to bike parking spaces was 100 to 1, whereas the ratio of cars to bikes registered on campus was 25 to 1.
- Authorities: The campus police chief told the college newspaper that she believed a problem existed for students who tried to park bicycles legally.

On the basis of his preliminary listing of possible reasons in support of the claim, this student decided that his subject was worth more research. He was on the way to amassing a set of good reasons and evidence that were sufficient to support his claim.

In shaping your own arguments, try putting claims and reasons together early in the writing process to create enthymemes. Think of these enthymemes as test cases or even as topic sentences:

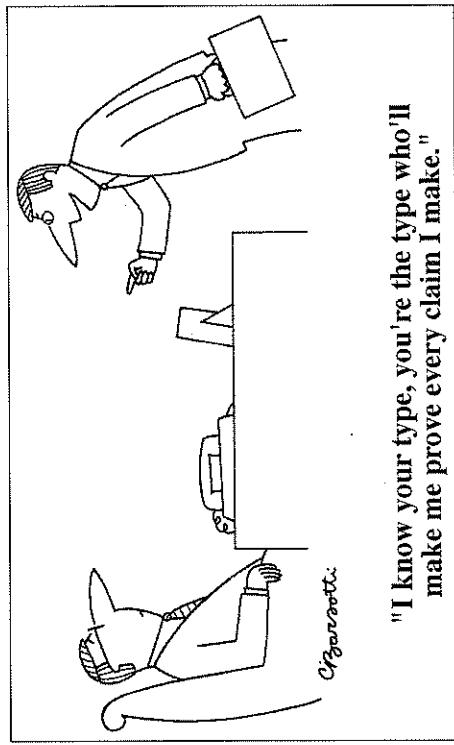

Bicycle parking spaces should be expanded because the number of bikes on campus far exceeds the available spots.

It's time to lower the driving age because I've been driving since I was fourteen and it hasn't hurt me.

National legalization of marijuana is long overdue since it is already legal in over twenty states, has shown to be less harmful than alcohol, and provides effective relief from pain associated with cancer.

Violent video games should be carefully evaluated and their use monitored by the industry, the government, and parents because these games cause addiction and psychological harm to players.

As you can see, attaching a reason to a claim often spells out the major terms of an argument.

But your work is just beginning when you've put a claim together with its supporting reasons and evidence—because readers are certain to begin questioning your statement. They might ask whether the reasons and evidence that you're offering really do support the claim: should the driving age really be changed just because you've managed to drive since you were fourteen? They might ask pointed questions about your evidence: exactly how do you know that the number of bikes on campus far exceeds the number of spaces available? Eventually, you've got to address potential questions about the quality of your assumptions and the quality of your evidence. The connection between claim and reason(s) is a concern at the next level in Toulmin argument.

#### Determining Warrants

Crucial to Toulmin argument is appreciating that there must be a logical and persuasive connection between a claim and the reasons and data supporting it. Toulmin calls this connection the warrant. It answers the question How exactly do I get from the data to the claim? Like the warrant in legal situations (a search warrant, for example), a sound warrant in an argument gives you authority to proceed with your case.

The warrant tells readers what your (often unstated) assumptions are—for example, that any practice that causes serious disease should be banned by the government. If readers accept your warrant, you can then present specific evidence to develop your claim. But if readers dispute your warrant, you'll have to defend it before you can move on to the claim itself.

Stating warrants can be tricky because they can be phrased in various ways. What you're looking for is the general principle that enables you to justify the move from a reason to a specific claim—the bridge connecting them. The warrant is the assumption that makes the claim seem believable. It's often a value or principle that you share with your readers. Here's an easy example:

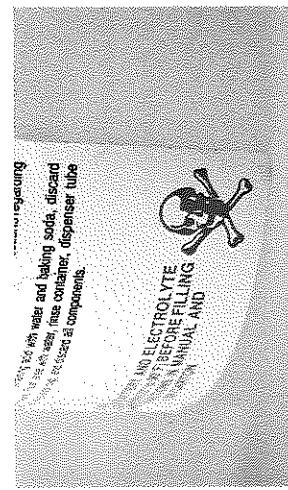

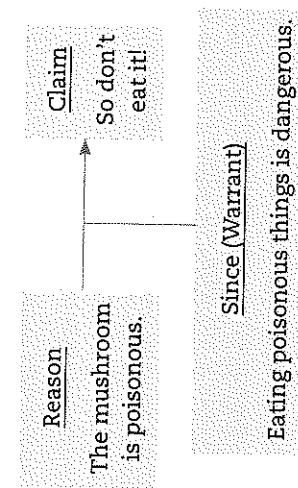

Don't eat that mushroom: it's poisonous.

The warrant supporting this enthymeme can be stated in several ways, always moving from the reason (it's poisonous) to the claim (Don't eat that mushroom):

Anything that is poisonous shouldn't be eaten.

If something is poisonous, it's dangerous to eat.

Here's the relationship, diagrammed:

A simple icon—a skull and crossbones—can make a visual argument that implies a claim, a reason, and a warrant. PhotoLink/Getty Images

Perfectly obvious, you say? Exactly—and that's why the statement is so convincing. If the mushroom in question is a death cap or destroying angel (and you might still need expert testimony to prove that it is), the warrant does the rest of the work, making the claim that it supports seem logical and persuasive.

Let's look at a similar example, beginning with the argument in its basic form:

We'd better stop for gas because the gauge has been reading empty for more than thirty miles.

In this case, you have evidence that is so clear (a gas gauge reading empty) that the reason for getting gas doesn't even have to be stated: the tank is almost empty. The warrant connecting the evidence to the claim is also pretty obvious:

If the fuel gauge of a car has been reading empty for more than thirty miles, then that car is about to run out of gas.

Since most readers would accept this warrant as reasonable, they would also likely accept the statement the warrant supports.

Naturally, factual information might undermine the whole argument: the fuel gauge might be broken, or the driver might know that the car will go another fifty miles even though the fuel gauge reads empty. But in most cases, readers would accept the warrant.

Now let's consider how stating and then examining a warrant can help you determine the grounds on which you want to make a case. Here's a political enthymeme of a familiar sort:

Flat taxes are fairer than progressive taxes because they treat all tax-payers in the same way.

Warrants that follow from this enthymeme have power because they appeal to a core American value—equal treatment under the law:

Treating people equitably is the American way.

All people should be treated in the same way.

You certainly could make an argument on these grounds. But stating the warrant should also raise a flag if you know anything about tax policy. If the principle is obvious and universal, then why do federal and many progressive state income taxes require people at higher levels of income to pay at higher tax rates than people at lower income levels? Could the warrant not be as universally popular as it seems at first glance? To explore the argument further, try stating the contrary claim and warrants:

Progressive taxes are fairer than flat taxes because people with more income can afford to pay more, benefit more from government, and shelter more of their income from taxes.

People should be taxed according to their ability to pay.

People who benefit more from government and can shelter more of their income from taxes should be taxed at higher rates.

Now you see how different the assumptions behind opposing positions really are. If you decided to argue in favor of flat taxes, you'd be smart to recognize that some members of your audience might have fundamental reservations about your position. Or you might even decide to shift your entire argument to an alternative rationale for flat taxes.

Flat taxes are preferable to progressive taxes because they simplify the tax code and reduce the likelihood of fraud.

Here, you have two stated reasons that are supported by two new warrants:

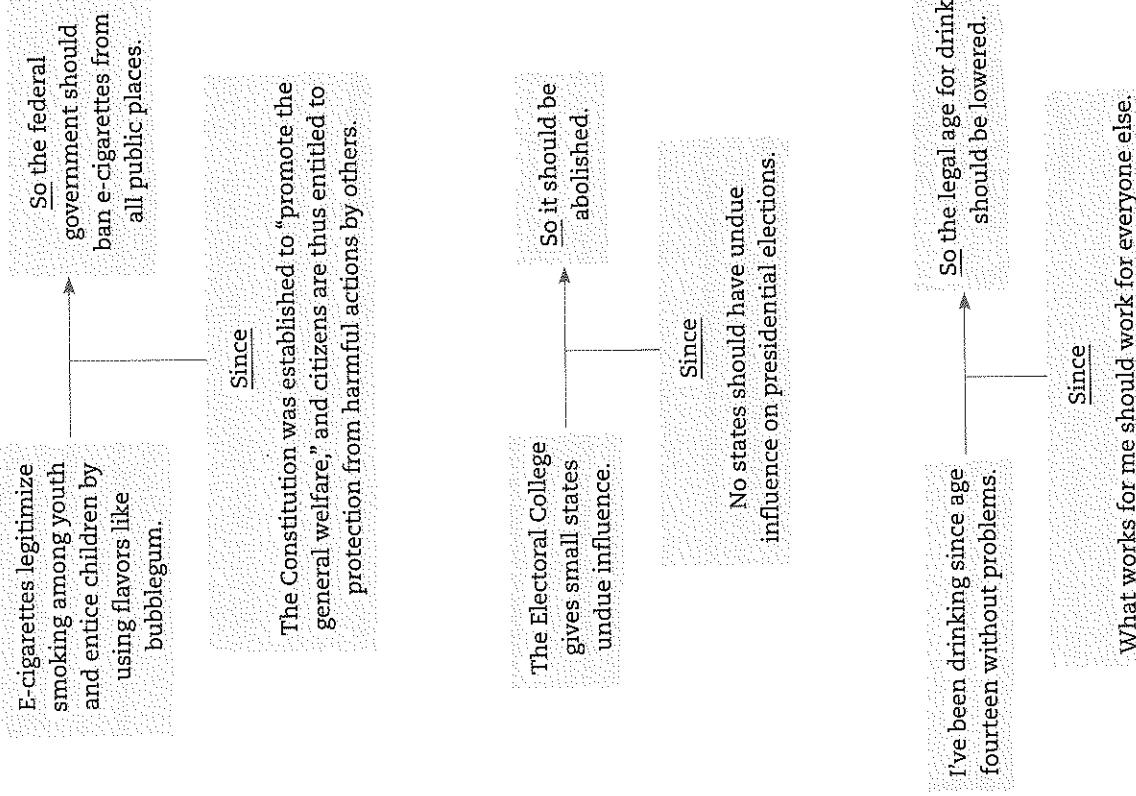

Taxes that simplify the tax code are desirable.

Taxes that reduce the likelihood of fraud are preferable.

Whenever possible, you'll choose your warrant knowing your audience, the context of your argument, and your own feelings.

Be careful, though, not to suggest that you'll appeal to any old warrant that works to your advantage. If readers suspect that your argument for progressive taxes really amounts to I want to stick it to people who work harder than I, your credibility may suffer a fatal blow.

### Examples of Claims, Reasons, and Warrants

**RESPOND •**

At their simplest, warrants can be stated as “X is good” or “X is bad.” Return to the letters to the editor or blog postings that you analyzed in the exercise on p. 131, this time looking for the warrant that is behind each claim. As a way to start, ask yourself these questions:

If I find myself agreeing with the letter writer, what assumptions about the subject matter do I share with him/her?

If I disagree, what assumptions are at the heart of that disagreement?

The list of warrants you generate will likely come from these assumptions.

**Offering Evidence: Backing**

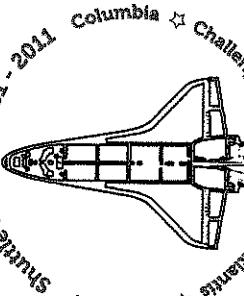

The richest, most interesting part of a writer’s work—backing—remains to be done after the argument has been outlined. Clearly stated claims and warrants show you how much evidence you will need. Take a look at this brief argument, which is both debatable and controversial, especially in tough economic times:

NASA should launch a human expedition to Mars because Americans need a unifying national goal.

Here’s one version of the warrant that supports the enthymeme:

What unifies the nation ought to be a national priority.

To run with this claim and warrant, you’d first need to place both in context. Human space exploration has been debated with varying intensity following the 1957 launch of the Soviet Union’s Sputnik satellite, after the losses of the U.S. space shuttles *Challenger* (1986) and *Columbia* (2003), and after the retirement of the Space Shuttle program in 2011. Acquiring such background knowledge through reading, conversation, and inquiry of all kinds will be necessary for making your case. (See Chapter 3 for more on gaining authority.)

There’s no point in defending any claim until you’ve satisfied readers that questionable warrants on which the claim is based are defensible. In Toulmin argument, evidence you offer to support a warrant is called backing.

Warrant

What unifies the nation ought to be a national priority.

Backing

Americans want to be part of something bigger than themselves.  
(Emotional appeal as evidence)

In a country as diverse as the United States, common purposes and values help make the nation stronger. (Ethical appeal as evidence)

In the past, government investments such as the Hoover Dam and the Apollo moon program enabled many—though not all—Americans to work toward common goals. (Logical appeal as evidence)

In addition to evidence to support your warrant (backing), you’ll need evidence to support your claim.

Argument in Brief (Enthymeme/Claim)

NASA should launch a human expedition to Mars because Americans now need a unifying national goal.

Evidence

The American people are politically divided along lines of race, ethnicity, religion, gender, and class. (Fact as evidence)

A common challenge or problem often unites people to accomplish great things. (Emotional appeal as evidence)

A successful Mars mission would require the cooperation of the entire nation—and generate tens of thousands of jobs. (Logical appeal as evidence)

A human expedition to Mars would be a valuable scientific project for the nation to pursue. (Appeal to values as evidence)

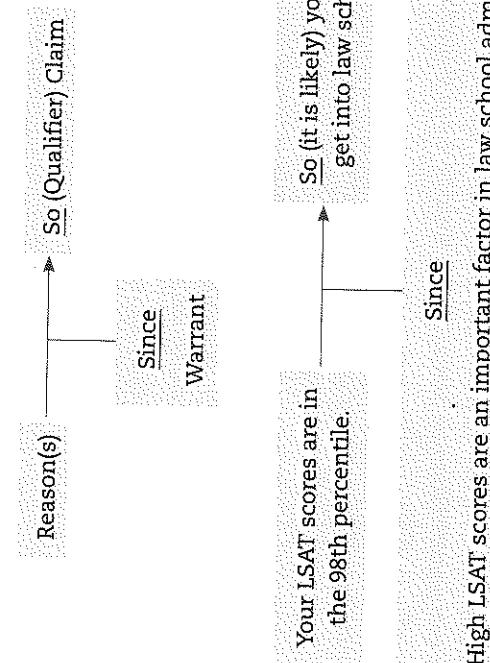

As these examples show, appeals to values and emotions can be just as appropriate as appeals to logic and facts, and all such claims will be stronger if a writer presents a convincing ethos. In most arguments, appeals work together rather than separately, reinforcing each other. (See Chapter 3 for more on ethos.)

### Using Qualifiers

Experienced writers know that qualifying expressions make writing more precise and honest. Toulmin logic encourages you to acknowledge limitations to your argument through the effective use of qualifiers. You can save time if you qualify a claim early in the writing process. But you might not figure out how to limit a claim effectively until after you've explored your subject or discussed it with others.

Qualifiers	more or less	often
few	in some cases	perhaps
it is possible	many	under these conditions
rarely	typically	possibly
it seems	routinely	for the most part
some	most	if it were so
it may be	one might argue	in general
sometimes		

Never assume that readers understand the limits you have in mind. Rather, spell them out as precisely as possible, as in the following examples:

Unqualified People who don't go to college earn less than those who do.

Qualified In most cases, people who don't go to college earn less than those who do.

### Understanding Conditions of Rebuttal

In the Toulmin system, potential objections to an argument are called conditions of rebuttal. Understanding and reacting to these conditions are essential to support your own claims where they're weak and also to recognize and understand the reasonable objections of people who see the world differently. For example, you may be a big fan of the Public Broadcasting Service (PBS) and the National Endowment for the Arts (NEA) and prefer that federal tax dollars be spent on these programs. So you offer the following claim:

Claim      The federal government should support the arts.

You need reasons to support this thesis, so you decide to present the issue as a matter of values:

Argument      The federal government should support the arts in Brief because it also supports the military.

Now you've got an enthymeme and can test the warrant, or the premises of your claim:

Warrant      If the federal government can support the military, then it can also support other programs.

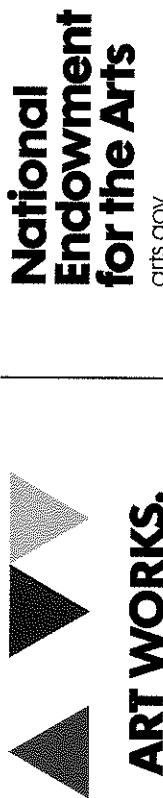

But the warrant seems frail: you can hear a voice over your shoulder saying, "In essence, you're saying that Because we pay for a military, we should pay for everything!" So you decide to revise your claim:

Revised      If the federal government can spend huge amounts of money on the military, then it can afford to spend moderate amounts on arts programs.

Now you've got a new warrant, too:

Revised      A country that can fund expensive programs can also afford less expensive programs.

This is a premise that you can defend, since you believe strongly that the arts are just as essential as a strong military is to the well-being of the

The new NEA logo

country. Although the warrant now seems solid, you still have to offer strong grounds to support your specific and controversial claim. So you cite statistics from reputable sources, this time comparing the federal budgets for the military and the arts. You break them down in ways that readers can visualize, demonstrating that much less than a penny of every tax dollar goes to support the arts.

But then you hear those voices again, saying that the “common defense” is a federal mandate; the government is constitutionally obligated to support a military, and support for the arts is hardly in the same league! Looks like you need to add a paragraph explaining all the benefits the arts provide for very few dollars spent, and maybe you should suggest that such funding falls under the constitutional mandate to “promote the general welfare.” Though not all readers will accept these grounds, they’ll appreciate that you haven’t ignored their point of view: you’ve gained credibility by anticipating a reasonable objection.

Dealing with conditions of rebuttal is an essential part of argument. But it’s important to understand rebuttal as more than mere opposition. Anticipating objections broadens your horizons, makes you more open to alternative viewpoints, and helps you understand what you need to do to support your claim.

Within Toulmin argument, conditions of rebuttal remind us that we’re part of global conversations: Internet newsgroups and blogs provide potent responses to positions offered by participants in discussions; instant messaging and social networking let you respond to and challenge others; links on Web sites form networks that are infinitely variable and open. In cyberspace, conditions of rebuttal are as close as your screen.

you considered the conditions of rebuttal? Have you qualified your claim adequately? Next, write a brief revision plan: How will you buttress the argument in the places where it is weakest? What additional evidence will you offer for the warrant? How can you qualify your claim to meet the conditions of rebuttal? Then show your paper to a classmate and have him/her do a Toulmin analysis: a new reader will probably see your argument in different ways and suggest revisions that may not have occurred to you.

#### Outline of a Toulmin Argument

Consider the claim that was mentioned on p. 137:

Claim	The federal government should ban e-cigarettes.		
Qualifier	The ban would be limited to public spaces.		
Good Reasons	E-cigarettes have not been proven to be harmless. E-cigarettes legitimize smoking and also are aimed at recruiting teens and children with flavors like bubblegum and cotton candy.		
Warrants	The Constitution promises to “promote the general welfare.”	Citizens are entitled to protection from harmful actions by others.	
Backing	The United States is based on a political system that is supposed to serve the basic needs of its people, including their health.	Analysis of advertising campaigns that reveal direct appeals to children	Lawsuits recently won against e-cigarette companies, citing the link between e-cigarettes and a return to regular smoking
Evidence		Examples of bans on e-cigarettes already imposed in many public places	Cite the FDA and medical groups on effect of e-cigarette smoking.
Authority			E-cigarette smokers have rights, too. Smoking laws should be left to the states. Such a ban could not be enforced.
Conditions of Rebuttal			The ban applies to public places; smokers can smoke in private.

## A Toulmin Analysis

You might wonder how Toulmin's method holds up when applied to an argument that is longer than a few sentences. Do such arguments really work the way that Toulmin predicts? In the following short argument, well-known linguist and author Deborah Tannen explores the consequences of a shift in the meaning of one crucial word: compromise. Tannen's essay, which originally appeared as a posting on Politico.com on June 15, 2011, offers a series of interrelated claims based on reasons, evidence, and warrants that culminate in the last sentence of the essay. She begins by showing that the word *compromise* is now rejected by both the political right and the political left and offers good reasons and evidence to support that claim. She then moves back to a time when "a compromise really was considered great," and offers three powerful pieces of evidence in support of that claim. The argument then comes back to the present, with a claim that the compromise and politeness of the nineteenth century have been replaced by "growing enmity." That claim is supported with reasoning and evidence that rest on an underlying warrant that "vituperation and seeing opponents as enemies is corrosive to the human spirit." The claims in the argument—that compromise has become a dirty word and that enmity and an adversarial spirit are on the rise—lead to Tannen's conclusion: rejecting compromise breaks the trust necessary for a democracy and thus undermines the very foundation of our society. While she does not use traditional qualifying words, she does say that the situation she describes is a "threat" to our nation, which qualifies the claim to some extent: the situation is not the "death" of our nation but rather a "threat." Tannen's annotated essay follows.

## Why Is "Compromise" Now a Dirty Word?

DEBORAH TANNEN

When did the word "compromise" get compromised? When did the negative connotations of "He was caught in a compromising position" or "She compromised her ethics" replace the positive connotations of "They reached a compromise?"

House Speaker John Boehner said it outright on 60 Minutes last year. When talking about "compromise," Boehner said, "I reject the word."

"When you say the word 'compromise,'" he explained, "... a lot of Americans look up and go, 'Uh-oh, they're gonna sell me out.'" His position is common right now.

In the same spirit, Tony Perkins wrote in a recent CNN.com op-ed piece, "When it comes to conservative principles, compromise is the companion of losers."

The political right is particularly vehement when it comes to compromise. Conservatives are now strongly swayed by the tea party movement, whose clarion call is a refusal to compromise, regardless of the practical consequences.

But the rejection of compromise is more widespread than that. The left regularly savages President Barack Obama for compromising too soon, too much or on the wrong issues. Many who fervently sought universal health coverage, for example, could not celebrate its near accomplishment because the president gave up the public option.

The death of compromise has become a threat to our nation as we confront crucial issues such as the debt ceiling and that most basic of legislative responsibilities: a federal budget. At stake is the very meaning of what had once seemed unshakable: "the full faith and credit" of the U.S. government.

Contextual information leading up to initial claim

Initial claim

Reason

Back when the powerful nineteenth-century senator Henry Clay was called “the great compromiser,” achieving a compromise really was considered great. On three occasions, the Kentucky statesman helped the Senate preserve the Union by crafting compromises between the deadlocked slave-holding South and the Northern free states. In 1820, his Missouri Compromise stemmed the spread of slavery. In 1833, when the South was poised to defy federal tariff laws favored by the North and the federal government was about to authorize military action, Clay found a last-minute compromise. And his Compromise of 1850 averted civil war for at least a decade.

It was during an 1850 Senate debate that Clay stated his conviction: “I go for honorable compromise whenever it can be made.” Something else he said then holds a key to how the dwindling respect for compromise is related to larger and more dangerous developments in our nation today.

“All legislation, all government, all society,” Clay said, “is formed upon the principle of mutual concession, politeness, comity, courtesy upon these, everything is based.” Concession, politeness, comity, courtesy—none of these words could be uttered now with the assurance of listeners’ approval. The word “comity” is rarely heard; “concession” sounds weak; “politeness” and “courtesy” sound quaint—much like the contemporary equivalent, “civility.”

That Clay lauded both compromise and civil discourse in the same speech reveals the link between, on the one hand, the word “compromise” falling into disrepute, and, on the other, the glorification of aggression that I wrote about in my book, *The Argument Culture: Stopping America’s War of Words*.

Today we have an increasing tendency to approach every task—and each other—in an ever more adversarial spirit. Nowhere is this more evident, or more destructive, than in the Senate.

Though the two-party system is oppositional by nature, there is plenty of evidence that a certain (yes) comity has been replaced by growing enmity. We don’t have to look as far back as Clay for evidence. In 1996, for example, an unprecedented fourteen incumbent senators announced that they would not seek reelection. And many, in farewell essays, described an increase in vituperation and partisanship that made it impossible to do the work of the Senate.

“The bipartisanship that is so crucial to the operation of Congress,” Howell Heflin of Alabama wrote, “especially the Senate, has been abandoned.” J. James Exon of Nebraska described an “ever-increasing vicious polarization of the electorate” that had “all but swept aside the former preponderance of reasonable discussion.”

But this is not happening only in the Senate. There is a rising adversarial spirit among the people and the press. It isn’t only the obvious invective on TV and radio. A newspaper story that criticizes its subject is praised as “tough”; one that refrains from criticism is scorned as a “puff piece.”

The notion of “balance” today often leads to a search for the most extreme opposing views—so they can be presented as “both sides,” leaving no forum for subtlety, multiple perspectives or the middle ground, where most people stand. Framing issues in this polarizing way reinforces the impression that Boehner voiced: that compromising is selling out.

Being surrounded by vituperation and seeing opponents as enemies is corrosive to the human spirit. It’s also dangerous to our democracy. The great anthropologist Margaret Mead explained this in a 1962 speech.

“We are essentially a society which must be more committed to a two-party system than to either party,” Mead said. “The only way you can have a two-party system is to belong to a party formally and to fight to the death . . . ” not for your party to win but “for the right of the other party to be there too.”

Today, this sounds almost as quaint as “comity” in political discourse.

Mead traced our two-party system to our unique revolution: “We didn’t kill a king and we didn’t execute a large number of our people, and we came into our own without the stained hands that have been associated with most revolutions.”

With this noble heritage, Mead said, comes “the obligation to keep the kind of government we set up”—where members of each party may “disagree mightily” but still “trust in each other and trust in our political opponents.”

Losing that trust, Mead concluded, undermines the foundation of our democracy. That trust is exactly what is threatened when the very notion of compromise is rejected.

**What Toulmin Teaches**

As Tannen’s essay demonstrates, few arguments you read have perfectly sequenced claims or clear warrants, so you might not think of Toulmin’s terms in building your own arguments. Once you’re into your subject, it’s easy to forget about qualifying a claim or finesseing a warrant. But remembering what Toulmin teaches will always help you strengthen your arguments:

- Claims should be clear, reasonable, and carefully qualified.
- Claims should be supported with good reasons and evidence. Remember that a Toulmin structure provides the framework of an argument, which you fill out with all kinds of data, including facts, statistics, precedents, photographs, and even stories.
- Claims and reasons should be based on assumptions your audience will likely accept. Toulmin’s focus on warrants can be confusing because it asks us to look at the assumptions that underlie our arguments—something many would rather not do. Toulmin pushes us to probe the values that support any argument and to think of how those values relate to particular audiences.
- Effective arguments respectfully anticipate objections readers might offer. Toulmin argument acknowledges that any claim can crumble under certain conditions, so it encourages a complex view that doesn’t demand absolute or unqualified positions.

It takes considerable experience to write arguments that meet all these conditions. Using Toulmin’s framework brings them into play automatically. If you learn it well enough, constructing good arguments can become a habit.
