b. about 192.2 ft 8. The area of a circle is  $\pi r^2$ .

The arc length of an entire circle is  $2\pi r$ . You can now set up the following proportion:

$$\frac{\text{Area of a sector}}{\text{Area of circle}} = \frac{\text{Arc length of sector}}{\text{Arc length of circle}}$$

Substituting the appropriate values into the proportion, you obtain the following:

$$\frac{A}{\pi r^2} = \frac{r\theta}{2\pi r}$$

Now, solving for  $A$ , you obtain the formula for the area of a sector of a circle:  $A = \frac{1}{2}\theta r^2$ .
